NBM-OP Modular dust collector

[view enlarge](#)

The **BELFAB NBM-OP** series is engineered as a compact and high efficient collector solution, offering a height of less than 11'. This unit is designed to operate as either a dedicated "stand alone", or main dust collector within a woodworking facility.

- ▶ **Performances curves**

The NBM-OP open system design integrates **BELFAB** modular filter technology. This feature makes possible to increase filtration surface cost effectively, with the introduction of additional filter modules.

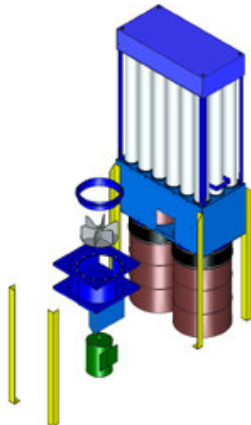

This expandable filter module capability makes it possible to offer large filtration surfaces, capable of developing a air to cloth ratio better than 6:1. This feature makes ideal for dust collection application involving moderate to large dust volume in either coarse or fine material.

The **BELFAB** dust collector series comes with our patented upgradeable blower, that makes it possible to increase blower performance (on our LW/NBM blower) from a 2HP/1000CFM to a 20HP/ 6,000CFM MAX by simply replacing motor and impeller within the same fan housing. Our optional HUMMER 1800 RPM fan offers super quiet operation at up to 6000 CFM (see note).

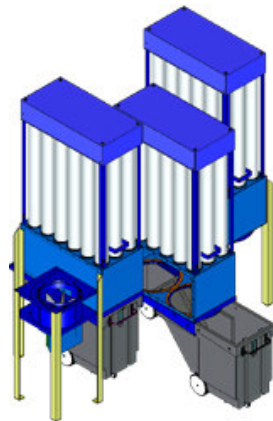

The NBM-OP series comes standard with our manual mechanical shaker. This unique vertical bag shaking system is engineered to offer optimum bag cleaning.

DISPOSAL OPTIONS

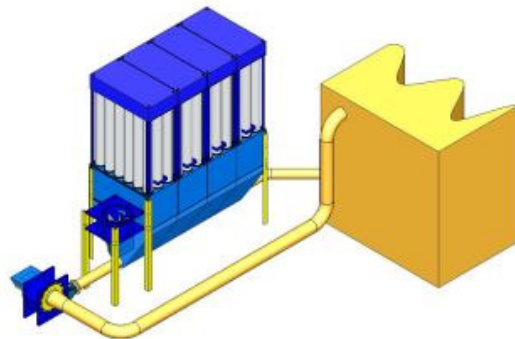

Steel or plastic drum

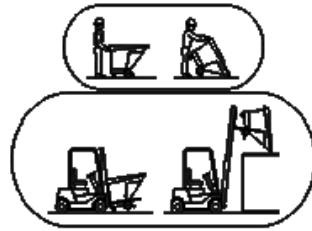

Tilt truck(plastic bin)
(tilt truck& adaptor option)

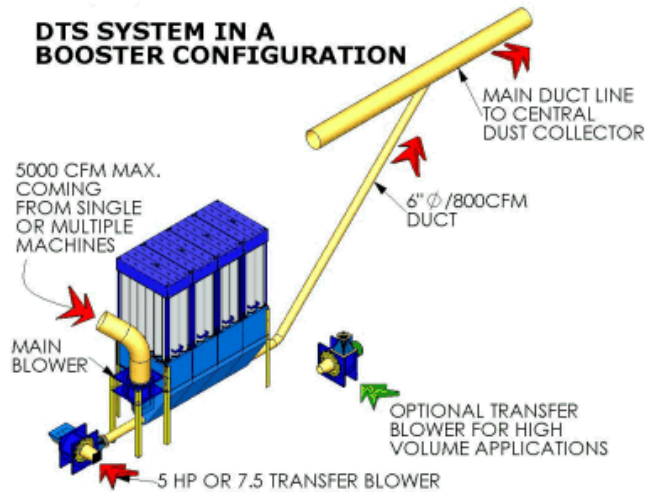

Continuous dust transfer

Patent Pending

DTS SYSTEM IN A BOOSTER CONFIGURATION

► **Features**

- Low maintenance direct drive centrifugal fan
- High efficiency TEFC motor, UL & CSA approved
- High efficiency polytwill filter bag
- Vertical mechanical manual shaker
- Drum attachments include: filter sleeve & quick release clamp
- The unit is configured for push application onl

► **Options**

- Tilt truck plastic bin & adaptor
- Silencer (N/A for Hummer blower)
- 55 gallon drums
- Manual starter
- Dust transfer system
